

The Flyway Glyph — asset sheet

What it is

Three strokes climbing to the right: a flock rising, and the arc of the route they fly.
Stroke weight tapers 1.00 / 0.88 / 0.78 from bottom-left to top-right, so the near bird reads closest and the flock recedes into distance. Angle of climb: 22 degrees.

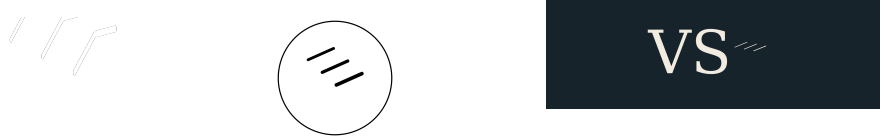

Master — rendered at four sizes

Profile photo — 640px and the 32px test

Variants

Winged (large use only) Chop (print / emboss) VS lockup

Specs

Angle of climb	22 degrees
Offset between strokes	0.62 L across, 0.30 L up
Thickness taper	1.00 / 0.88 / 0.78 (recession)
Stroke weight	8.5% of glyph height (12% for avatar)
Watermark size	28-40px tall on a 2000px export
Watermark opacity	12-18% white on dark, 15-22% black on light
Placement	glyph top-left at 4% margin + handle bottom-right at 2.5%
Never	below 24px tall, or in Ember on Slate (too little contrast)
